epd electric project and consultancy Yılmaz Oğralı

**1979 - 2023
WHO WE ARE ?
WHAT WE DO ?**

Our project group has up to now; prepared electricity projects primarily in Turkey, as well as in foreign countries such as Iraq, Ukraine, Azerbaijan, Kazakhstan, Bosnia Herzegovina, Libya, and Russia intended for various purposes (Hotel, Hospital, University, Sanctuary, Business Centre, Factories, Public Buildings and High-rise Buildings).

**For more detailed information
please visit our Web Site at**

www.esanmuhendislik.com

DEAR CUSTOMERS,

Our Company, which was established by Electrical Engineer Yılmaz OĞRALI in 1979 under the title "Esan Mühendislik" and started, engaging with sectoral activities; has been creating solutions of design, drawing and consultancy of Heavy and week current electricity installation projects for 44 years. We have justified happiness of successfully completing more than five hundred Project studies both in and abroad until today.

While submitting to you our operating style, areas of work, corporate structure, and our references in this file, we would also like to take this opportunity to state that we look forward to the chance of working with you in the future. Yours respectfully

The Matters That We Consider in Preparation of Projects

The drawings and calculations related to following systems constitute the content of our project services. We project all or some of these systems by considering the requests of the employer within the scope of current standards, laws and regulations according to the structure type and usage purpose.

- a) Power distribution installation;
 - 1) Low voltage power distribution,
 - 2) Electric outlet installation,
 - 3) Power distribution – motor feedings for mechanical installation.
- b) Reserve power systems;
 - 1) Diesel – generator group,
 - 2) Uninterrupted power supply,
 - 3) Central accumulator group.
- c) IlluMINATION;
 - 1) General illuMINATION,
 - 2) Exit/information/directing illuMINATION,
 - 3) Emergency illuMINATION,
 - 4) Exterior illuMINATION (surrounding illuMINATION),
 - 5) Special illuMINATION,
 - 6) IlluMINATION control – darkening
- d) Reactive power compensation
- e) Protection systems;
 - 1) Grounding facility,
 - 2) Protection system against lightning,
 - 3) Protection from high voltage,
 - 4) Protection from high current,
 - 5) Protection from waste current,
 - 6) Protection from indirect touching,
- f) Communication systems;
 - 1) Telephone,
 - 2) Information communication network,
 - 3) TV systems,
 - 4) Music broadcasting – announcement system,
 - 5) Call system,
 - 6) Central clock system,
 - 7) Intercom,
 - 8) Digital Signage
- g) Fire detection and alarm systems
- h) Security systems;
 - 1) Closed circuit TV system,
 - 2) Thief alarm systems,
 - 3) Passing control systems,
 - 4) Electronic watchman tour and control system,
 - 5) Gas detection system,
 - 6) Flood detection and alarm system,

i) Special systems;

- 1) Congress – conference systems,
- 2) Simultaneous translation service,
- 3) Audio and video systems,
- 4) Medical call systems,
- 5) Electronic queue call systems,
- 6) Information systems,
- 7) Building automation systems,
- 8) Structural cabling.

Our IlluMINAtion Projects and Technique

The human being is dependent to light in all his works and uses artificial light when natural light is not sufficient. Until mid-nineteenth century tinder, candle and oil lamps were used for illuMINAtion. With T. A. Edison to invent lamp with incandescent wire, a new trend has started in illuMINAtion technique. Then osmium, tungsten and tantalum wires have been used. There has been great development in discharge lamps and illuMINAtion technique has reached today's level with the spreading of fluorescent lamp.

The basic matter of illuMINAtion is the production, distribution, economy and measurement of light. Also, illuMINAtion examines the effects of light on human structure. It is no more sufficient to illuMINAt a room by hanging a lamp on the ceiling. It is required to consider and examine each place to be illuMINAted as a special problem. Besides physiologic and economic conditions, the architectural and technical opinions also take an important place in this exaMINAtion. The basic helpers of illuMINAtion are physics, physiologic-optic and psychology, and the solution of an illuMINAtion problem can only be performed by electrical engineers who have knowledge in the producing light and involved in artistic matters.

As a good illuMINAtion answers many requests and requirements at the same time, as Esanepd Engineering, we generally give priority to one of these requests while installing any illuMINAtion system. In this case, while the main purpose of illuMINAtion becomes answering this prioritized requirement, the others also are not ignored. We divide illuMINAtion into three according to their purposes: Physiologic, decorative and attractive illuMINAtion. While the purpose in physiologic illuMINAtion is to see the shape, color and details of the objects comfortably and rapidly, the purpose in decorative illuMINAtion is to arouse more esthetic effects, not displaying the objects desired to be seen as a whole. In attractive illuMINAtion, the purpose is to attract attention, in other words to advertise.

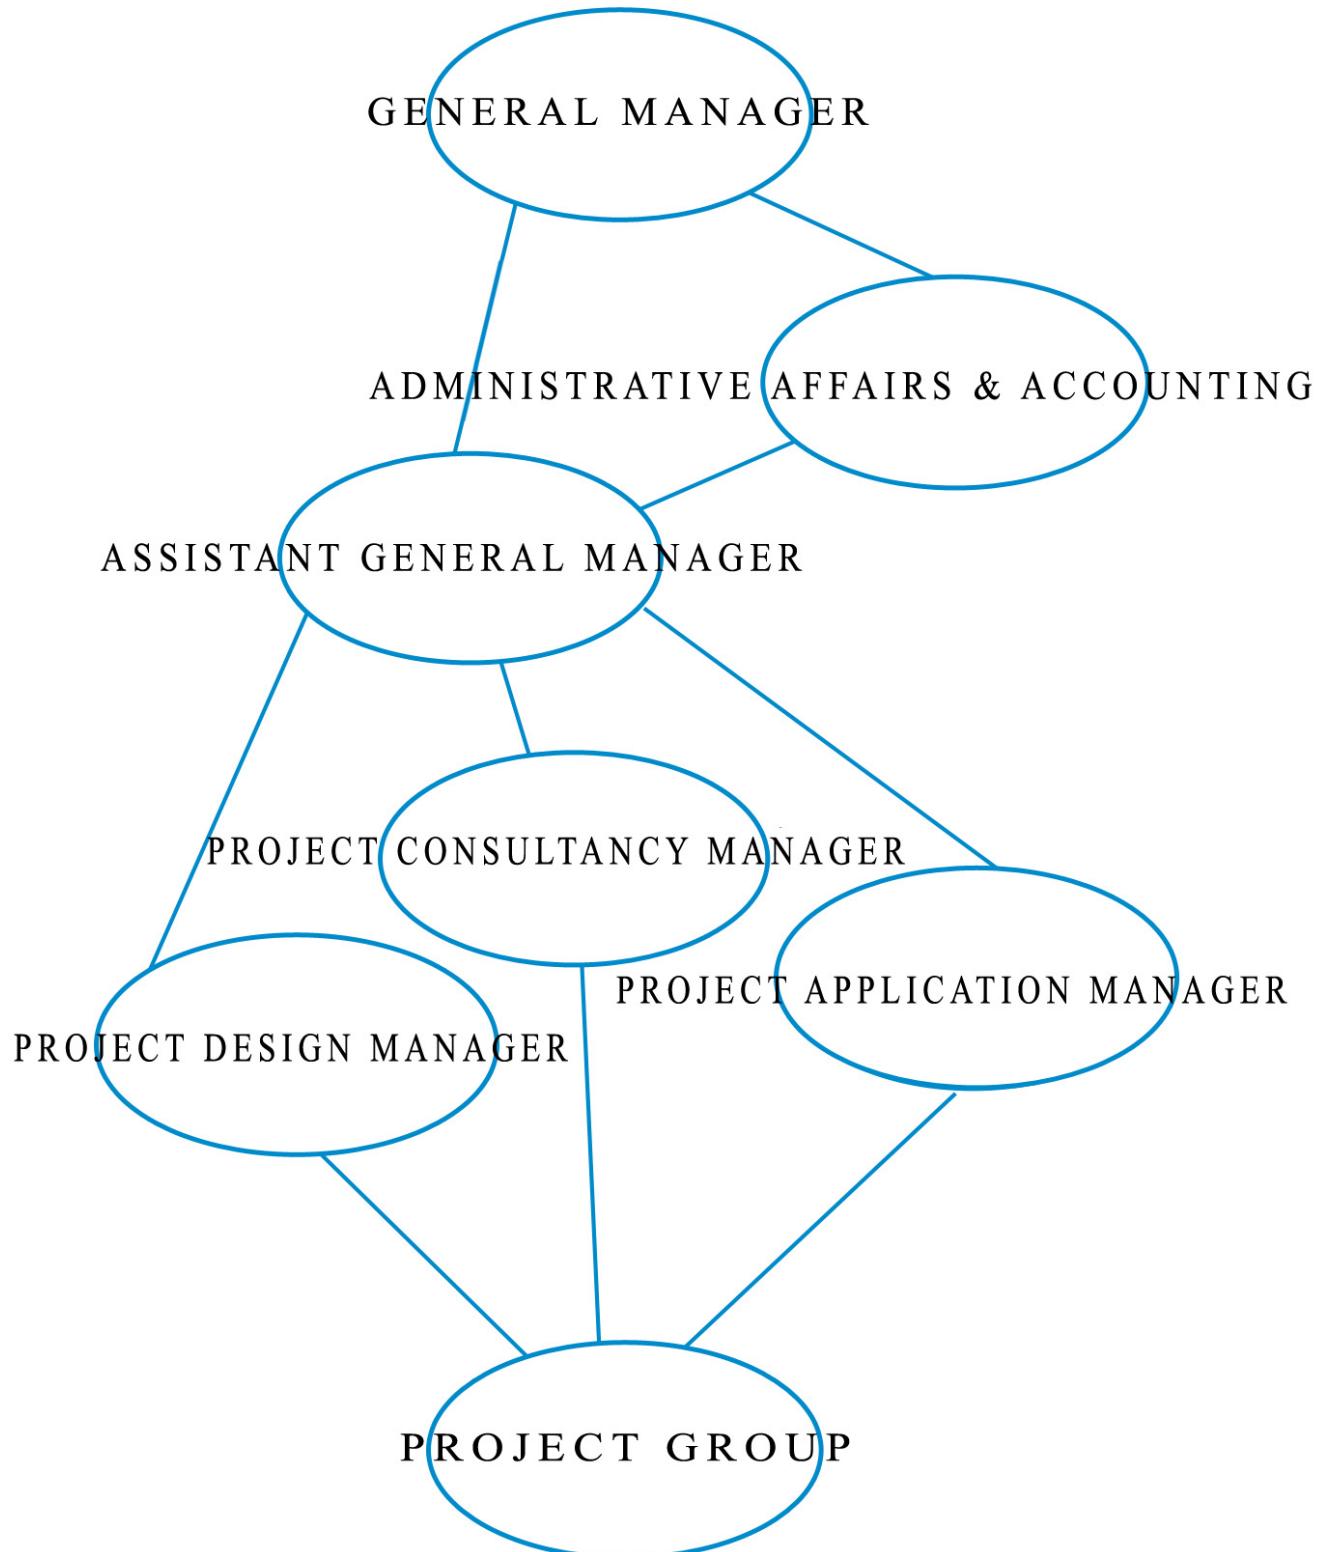

Esanepd Engineering produces its illuMINAtion solutions for both internal and external places by using natural and artificial illuMINAtion. Our work fields are constituted from tourism facilities, education buildings, health buildings, residences, administrative buildings, commercial buildings and industrial structures. While producing our unlimited illuMINAtion solutions, we first review all details and then prepare our computer supported three dimensional designs. Then, we draw our illuMINAtion projects again by computer supported and finally we carry out the application and turn the design into real.

Our Project Stages

- a) Study-suggestion report:** The systems that will provide the operating functions of the structure or the facility to be projected are described in detail by selecting them. Alternative solutions related to the systems to be projected are studied regarding to their feasibility and economical condition by specifying how they will be provided.
- b) PreliMINArY project:** Displaying the operating functions of suitable voltage distribution system on the project, placement of panels, estimated power and illuMINAtion calculations and sample single line schemas are prepared.
- c) Final project:** It is constituted from explanations, drawings, technical specifications, calculations and specifications describing how the wiring installations will be made according to the systems specified in the preliMINArY project together with the supplementary documents. Final projects are not performed according to a certain brand; the most commonly used systems are considered.
- d) Application Project:** (Production drawings and calculations) These are the projects that have been prepared by using the types and measurements of the selected devices of the manufacturer companies before starting the production of the installation. The final placement and final sizing of the selected devices to be used in internal wiring installations are only possible with these calculations and drawings.
- e) Final condition (done) project:** It is the project that displays the condition of the completed wiring installations that are ready to be operated by completing their manufacturing and assembly.

ORGANIZATIONAL STRUCTURE

CV
